CLEANROOM- 10.000

All autosampler vials are packed in pharmaceutical cleanroom according to following classifications.

- VDI 2083 class 5
- US Federal Standard 209E class 10.000
- ISO 14611-1 class 7

QUALITY CONTROL

Is carried out in accordance to ISO 9001.

GLASS QUALITY

All autosampler vials are manufactured from SCHOTT™ borosilicate glass of 1. hydrolytic class. Insuring consistent quality in every vial.

VIAL PRODUCTION MACHINES

Autosampler vials are manufactured with the newest technology equipment. Each vial is controlled by opto-electronic devices during the production.

SPECIAL PRODUCTION

We can manufacture any vial design you may require. We can supply any septa with requested durometer, diameter and thickness.

VIALS WITH PRE-ASSEMBLED CLOSURES

We can supply any vial with mounted screw caps or crimp seals. These are often required for analysis of smoke by the tobacco industry.

AUTOSAMPLER VIAL PACKAGING

All autosampler vials are packed in our reclosable transparent **CLAMPACK®** which prevents any contamination. Please see photo on the inside of the cover page.

PLASTIC VIALS

PLASTIC MICRO VIALS

POLYPROPYLENE

These vials are precision injection-molded and fit a variety of autosamplers. Polypropylene provides safety from breakage and dimension tolerance reliability for capping and instrumentation use.

These vials are non-ionic, minimizing pH changes and ion contamination.

TOPAS® VIALS WITH GLASS INSERTS

TOPAS

Limited volume inserts are type 1 borosilicate glass with a maximum volume of 300µl. The only contact between your product and the seal is the borosilicate glass insert which is compatible with organic solvents for gas and liquid chromatography.

These transparent vials are an economical alternative to glass vials with fused inserts. Possible breakage of the insert is reduced to a minimum.

MAGNETIC SEALS

BI-METAL® SEALS WITH PRE-ASSEMBLED SEPTA ALUMINUM & TIN

The Bi-Metal crimp seals were especially designed for use in the CTC Combi PAL® autosampler. The center portion is made of tin and can be picked up by a robot magnet. Crimping is very easy because the outside is made of aluminum.

These crimp seals solve all the problems incurred with the present steel seals available that are very hard to crimp and decrimp.

Bi-Metal crimp seals with 8mm hole can be used for SPME.

TEMPERATURE RANGE:

Butyl/PTFE	140°C
Blue Silicone/PTFE	200°C
Red silicone/PTFE	250°C

CRIMP SEALS WITH PRE-ASSEMBLED SEPTA

ALUMINUM

Available with a variety of different liner materials

- ETFE-faced natural rubber for routine analysis
- PTFE-faced silicone rubber provides excellent resealing
- PTFE-silicone-PTFE reduces coring problems
- Butyl/PTFE-faced liner for long term storage

All crimp seals have large opening to reduce bent needles.

SNAP-ON®CAPS- 8mm

POLYETHYLENE

For use with all crimp top vials with 8mm crimp neck

Easily snaps on eliminating the use of crimpers

Holds approx. 30 psi internal pressure

Compatible with most autosamplers

Snap caps have a consistent seal pressure for all samples in the autosampler tray reducing the chance of failures caused by improper crimping

Available in two versions:

- (1) With molded septa 0.25mm thick for single use
- (2) With 5 different liners pre-assembled in the caps
 - PTFE
 - Silicone/PTFE
 - Pre-cut Silicone/PTFE
 - PTFE/Silicone/PTFE
 - Rubber/ETFE

SNAP-ON®CAPS- 20mm

POLYETHYLENE

For use with all crimp top vials with 20mm crimp neck
Easily snaps on vials eliminating the use of crimpers
Holds approx. 30 psi internal pressure
Compatible with most autosamplers

Snap caps have a consistent seal pressure for all samples in the autosampler tray reducing the chance of failures caused by improper crimping.

Snap caps are available in two different heights for a variety of rim finishes.

They are supplied with silicone/PTFE or butyl/PTFE septa pre-assembled in the caps.

SHELL VIALS & CAPS

BOROSILICATE GLASS

These vials and caps are an economical alternative to standard crimp and screw thread vials suitable for one-time use in most autosamplers that don't pressurize the vials.

The polyethylene caps have a 0.25mm star-center which eliminates vacuum build-up in the vials after injection. A special inside guide holds and centers limited volume inserts Cat.No.150820 and 150821 with up to 400µl capacity.

Complete with one-piece polyethylene caps which serve as both cap and septum.

LIMITED VOLUME INSERTS

MICROSERT® LIMITED VOLUME INSERTS BOROSILICATE GLASS

The insert is precisely in the center of the vial

- Insert automatically centers in the vial
- Large opening for ease of pipetting
- Perfect seal to septa
- Volume 250µl

Alternative to the very high prices vials with fused inserts.

No plastic feet or metal spring needed for alignment. The insert is always at the proper height for full injection of sample preventing the needle from bending or breaking the insert.

Since the insert is always at the same position in the neck of the vial a perfect seal to the septa is assured.

Inserts also come pre-installed in vials with or without caps for immediate use.

For use with crimp vials 151123, 151124, 151125 & 151126 only.

CAT.NO.	VOLUME	SIZE	CASE PACK
156105	250µl	6x30mm	100 pcs

CRIMP VIALS WITH MOUNTED HANGING INSERTS

Consists of wide opening crimp vials 151123, 151124, 151125 & 151126 and inserts 156105 pre-installed in vials for immediate use.

Eliminates the use of compression springs for insert alignment while offering the convenience of standard autosampler vials which can be reused.

GC-INJECTION PORT SEPTA

TEMPERATURE LIMIT

Theoretically silicone rubber retains its properties over a range of -100 to +315°C. But different formulations of silicone rubber have different characteristics which affect its performance at high temperatures. Additionally, the injection port temperature that is set on the GC is not an actual measure of the septum temperature. Most injection ports are designed with fins on the septum nut to help cool the septum. The actual septum temperature in most ports set at 400°C is usually in the range of 280°C or less (although the temperature one inch into the port will be 400°C).

SEPTUM BLEED

The traditional method of making low bleed septa is to polymerize and cross-link the silicone heavily, then bake it to drive off residuals, which results in a hard septum. Other septa can be conditioned by heating in the GC injection port, but once they are punctured the internal components are exposed and tend to show bleed.

SEPTUM CORING

Septum coring is an issue with anyone concerned with plugged needles or columns. Our septa have an excellent high-temperature softness, which reduces the incidence of tearing. This softness also enhances resealability and increases durability. It accommodates the use of wider needles or needles that are slightly bent, without a needle guide. However, we recommend the use of a needle guide since it extends the life of any septum by confining punctures to a small area.

GC-INJECTION PORT SEPTA

All septa are made from 100% pure premium silicone rubber. The longevity line of GC septa deliver the ultimate in low bleed and long life. Our unique formulation and conditioning process, as well as our ability to provide custom packaging, is what separates our GC septa from the rest.

FEATURES

- Conditioned for ultra low bleed
- Soft, strong premium silicone
- Manufactured to order
- Production date on each package

BENEFITS

- Reduced handling/contamination
- No interfering peaks
- Easy needle penetration/resealability
- Easily control/identify inventory

BI-METAL® CRIMP SEALS & SEPTA

ALUMINUM & TIN

These crimp seals solve all the problems incurred with the present steel caps available which are very hard to crimp and decrimp. They are made of aluminum for easy crimping and have a tin center so that the robot magnet can pick up the vial for transport.

The hole diameter of 8mm is suitable for SPME use.

SHELL VIALS

BOROSILICATE GLASS

Shell vials are economical for samples that do not require PTFE-lined septa. They use an inexpensive, one-piece polyethylene cap which has a piercing area with a thickness of 10 mil (0.25mm). With a cylindrical body and wide opening, the vials permit easy transfer of samples.

CAT.NO.	VOLUME	VIALS SIZE	OEM	CASE PACK

SCINTILLATION VIALS

SCINTILLATION VIALS

BOROSILICATE GLASS

YOU CAN COUNT ON THEM VIAL AFTER VIAL

Made from low-potassium glass and critical manufacturing tolerances assure reliable, consistent results in scintillation counting. Vials load properly into counting machines without jamming or breaking. Background counts are consistent and low, ultra violet transmission high.

These vials are used primarily for the radioisotope counting usually employed with very low levels of beta radioactivity.

SHELL VIALS

SHELL VIALS & CAPS

BOROSILICATE GLASS

These vials and caps are an economical alternative to standard crimp and screw thread vials suitable for one-time use in most autosamplers that don't pressurize the vials.

The polyethylene caps have a 0.25mm star-center which eliminates vacuum build-up in the vials after injection. A special inside guide holds and centers limited volume inserts with up to 300µl capacity- Cat.No. 150820.

Complete with one-piece polyethylene caps which serves as both cap and septum.

Vials and caps are supplied in our KITPACK®

SERVICES

We can also mount the screw caps on bottles and supply the weight of each bottle.

VIALSTATION® ACRYLIC

These Vialstations are made for use with limited volume inserts and vials.

They are made of heavy acrylic glass and stand firm on your lab bench without sliding around. Reagents and samples may be added and closed prior to placing the vials in the autosampler.

These Vialstations are especially handy for conical and round bottom vials which will not stand by themselves.

The design allows crimping while vials are still in the Vialstation. Not applicable for all versions.

CAT.NO.	VIAL/INSERT	HOLES	CASE PACK

VIALTAINER® POLYSTYROL

The solution to storage problems. For collecting, handling cataloging and storing samples.

A convenient, compact and readily accessible means of storing samples. Made from clear polystyrene. Accommodates either 77 or 88 vials.

Two sizes are available: 200x140x50mm and 150x90x40mm.

Alpha-numerical indexing of contents provides quick identification and location of samples.

Vialtainers come without vials.

SEPTA SELECTION GUIDE

SILICONE/PTFE

- Excellent resealing capabilities
- Autoclavable and excellent resistance to coring
- Chemical resistance until pierced
- Temperature range -40°C to 200°C

SILICONE/PTFE PRE-SLIT SEPTA

- Reduces the possibility of coring with blunt injection needles
- Prevent vacuum from forming inside vial
- Temperature range -40°C to 200°C
- Recommended for Shimadzu, Hitachi and other samplers with thin gauge needles

PTFE/SILICONE/PTFE

- Recommended for multiple injections
- Excellent resistance to coring
- Recommended for internal standards, trace analysis
- Temperature range -40°C to 200°C

PTFE

- Excellent solvent resistance
- For single injection only
- Not resealable
- Maximum temperature 260°C

RUBBER/PTFE

- Economical septa for routine analysis
- Easy to pierce
- Moderate resealability
- Chemical resistance until pierced
- Not recommended for multiple injections
- Temperature range -40°C to 120°C

SBR

- Excellent properties of resilience
- Resistant to moisture vapor
- Satisfactory with most moderate chemicals
- Not recommended for oils, strong acids and hydrocarbons
- Maximum temperature -30°C- +110°C

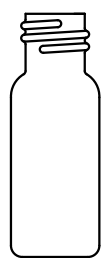

BUTYL/PTFE

- Economical septa for routine analysis
- Excellent for long term storage
- Temperature range -40°C to 120°C

POLYETHYLENE SEPTA

- Chemically resistant septa molded into cap
- Not resealable
- For single injection only
- Temperature range -50°C to 80°C

TERMS & CONDITIONS

ORDERING INFORMATION

TERMS & CONDITIONS OF SALE

Payment terms are 30 days net from invoice date. All prices are ex works and excl. V.A.T.

SHIPPING

All orders up to 30 kg per box are shipped with DPD, UPS, DHL, TNT or other similar carrier.

RETURNS

All returns must have our authorization prior to shipment. Please contact us if products should be returned for instructions. BCS cannot be held liable for products returned without authorization.

PRODUCT CHANGES

BCS reserves the right to change product specifications, design, quantities or prices without notice and liability for such changes.

CONDITIONS

All products in this catalog are intended for scientific, laboratory, research and industrial use only. The buyer is responsible for determining the suitability of any product for his own application. BCS assumes no liability under any circumstances for any incidental, consequential or compensatory damages arising from use of, or in conjunction with its products. Maximum liability shall be the invoice amount of the product. The information in this catalog is, to the best of our knowledge, correct and accurate but is not guaranteed to be so.

PACKAGING

Case pack quantities of products that are counted by weight are approximate.

DAMAGE CLAIMS

We have no liability for damages caused by freight forwarders. All goods are shipped at buyers risk. Insurance must be covered by the customer. Claims should be reported to the carrier immediately. Failure to do so makes you liable for payments of those goods should damage claims be rejected by the carrier.

WARRANTY

BCS warrants all products manufactured by it to be free from defects in material and/or workmanship at time of receipt by the customer.

CROSS REFERENCES

Where OEM numbers appear, they are listed for cross reference purposes only. We believe our products are equivalent but they may not be identical.
